

Hello. I am a commercial airline pilot. Many months out of the year, I operate "on call". In other words, when the airline needs me to fly a trip, they page me or call my home. The closest major airport I live by is about 45 minutes away. One of the main reasons I purchased XM Satellite Radio is because with my monthly paid subscription, I receive instant traffic and weather not only in the area I live in, BUT ALSO in the area I am many times arriving in by air. This proves to be very beneficial both to my flying as well as my route I take to and from the airport. At this time, I would like to urge you [the FCC] to reject the NAB's petition #04-160. With all due respect, accepting this petition means removing the availability of key information to me during my travels that proves to be very convenient and informative. Again, with much respect, may I please urge you to reject the NAB's petition #04-160. Thank you very much.
